Subject: Re: 40th Street Storm Sewer
Attachments: DIB0001

Lisa - Thank you for your e:mail. EPA did not know about the City's plans for replacing a storm sewer within the limits of OU-02 @ VB/I-70. There are several types of information that we would need before we could adequately identify EPA's concerns. Overall, EPA's concerns would be protection of the public, the environment as well as the City workers performing the work.

Specifically, we would like the following information:

1. City's schedule for performing this work
2. The size of the storm sewer, its location and the depth of the excavation - a map would be very helpful
3. Plans that the City has developed for this work - materials handling, contamination and dust control, health and safety plan, etc.
4. Plans for disposing of any materials off-site - What type of characterization will the City conduct of the materials to be disposed of; where does the City envision disposing of these materials? Does the City plan to store any of the materials on-site - if so where and what type of containment would be used?
5. Does the City plan on collecting soil samples and having them analyzed - if so for what parameters? Does the City have a sampling plan that would meet the Superfund requirements?

Once EPA has more information about the City's plans for the replacement of the storm sewer, we would be able to more specifically outline any concerns that we may have. Please give me a call at your earliest convenience.

Thank you.

Subject: 40th Street Storm Sewer

Good afternoon, Paula! I believe you know about the upcoming project where Denver will be replacing a storm sewer that will go through Pepsi and the Coliseum parking lot and disturb soils within VB/I-70 OU2. Does EPA need any advanced notice or information prior to digging?
Thanks!!

Lisa Farrell
